

Lab 7 & 9: Calculating landscape indices in FRAGSTATS

REM 429

Spring '17

Darcy Hammond & Eva Strand

Quiz - Friday, February 23

Overview

- ▶ Labs 7 and 9 will be focused on the effects that minimum mapping scale and temporal changes have on landscape metrics
- ▶ Lab 8 will be the mid-term exam!
- ▶ Objectives
 - ▶ Gain familiarity with common indices of landscape diversity and pattern
 - ▶ Illustrate the effects of minimum mapping unit (Lab 7) and thematic resolution (Lab 9) on landscape indices
 - ▶ Better understand factors that influence the selection and interpretation of indices

Minimum mapping unit

- ▶ Area = 36 ha, MMU = 1 ha
- ▶ Richness?
 - ▶ 5 (red, blue, black, green, yellow)
- ▶ Proportion of yellow?
 - ▶ $2/36 = 0.06$
- ▶ Proportion of red?
 - ▶ $7/36 = 0.19$
- ▶ Proportion of blue?
 - ▶ $11/36 = 0.31$

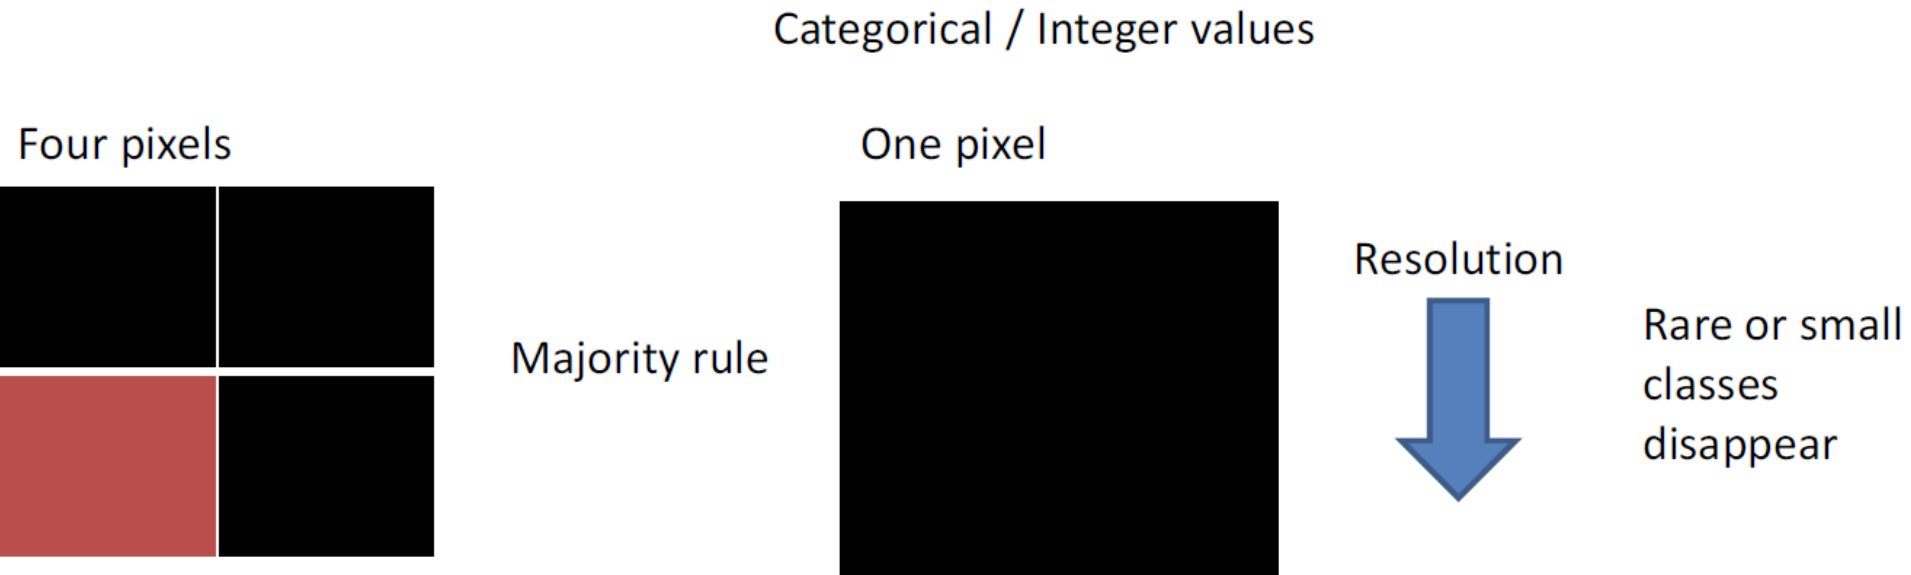

Minimum mapping unit

- ▶ Area = 36 ha, MMU = 4 ha
- ▶ Reclassification $\geq 50\%$
- ▶ Richness?
 - ▶ 3
- ▶ Proportion of yellow?
 - ▶ 0
- ▶ Proportion of red?
 - ▶ 0
- ▶ Proportion of blue?
 - ▶ $16/36 = 0.44$

Minimum mapping unit

Year 2000, 30m

- Low sagebrush steppe
- Arar - Phase 1
- Arar - Phase 2
- Arar - Phase 3
- Arar - Mature
- Mountain big sagebrush steppe
- Artr - Phase 1
- Artr - Phase 2
- Artr - Phase 3
- Artr - Mature
- Cele - Phase 1
- Cele - Phase 3
- Cele - Mature
- Aspen woodland
- Wet meadow
- Mountain riparian
- Mountain shrub
- Grassland
- Sagebrush steppe or Phase 1 Arar
- Sagebrush steppe or Phase 1 Artr

Year 2000, 100m

Year 2000, 500m

Year 1800, 30m

- Low sagebrush steppe
- Arar - Phase 1
- Arar - Phase 2
- Arar - Phase 3
- Arar - Mature
- Mountain big sagebrush steppe
- Artr - Phase 1
- Artr - Phase 2
- Artr - Phase 3
- Artr - Mature
- Cele - Phase 1
- Cele - Phase 3
- Cele - Mature
- Aspen woodland
- Wet meadow
- Mountain riparian
- Mountain shrub
- Grassland
- Sagebrush steppe or Phase 1 Arar
- Sagebrush steppe or Phase 1 Artr

Year 1900, 30m

- Low sagebrush steppe
- Arar - Phase 1
- Arar - Phase 2
- Arar - Phase 3
- Arar - Mature
- Mountain big sagebrush steppe
- Artr - Phase 1
- Artr - Phase 2
- Artr - Phase 3
- Artr - Mature
- Cele - Phase 1
- Cele - Phase 3
- Cele - Mature
- Aspen woodland
- Wet meadow
- Mountain riparian
- Mountain shrub
- Grassland
- Sagebrush steppe or Phase 1 Arar
- Sagebrush steppe or Phase 1 Artr

Year 2000, 30m

- Low sagebrush steppe
- Arar - Phase 1
- Arar - Phase 2
- Arar - Phase 3
- Arar - Mature
- Mountain big sagebrush steppe
- Artr - Phase 1
- Artr - Phase 2
- Artr - Phase 3
- Artr - Mature
- Cele - Phase 1
- Cele - Phase 3
- Cele - Mature
- Aspen woodland
- Wet meadow
- Mountain riparian
- Mountain shrub
- Grassland
- Sagebrush steppe or Phase 1 Arar
- Sagebrush steppe or Phase 1 Artr

FRAGSTATS

- ▶ Spatial pattern analysis program developed to quantify landscape structure
- ▶ Developed by Dr. Kevin McGarigal and Barbara Marks at Oregon State University in 1995
 - ▶ Currently maintained by University of Massachusetts
- ▶

Lab today -

- ▶ Download “Lab7Data.zip”
 - ▶ You can also start on Lab9Data.zip if you want
- ▶ Follow instructions in “Lab 7_Running FRAGSTATS.pdf” to open and run the program
 - ▶ You can look at the landscapes in ArcGIS but you don’t need to
 - ▶ Note: the instructions say download the data from the U:/ drive, just get it from BbLearn!
- ▶ Read the rubric “Lab 7&9_FRAGSTATS rubric.pdf”
- ▶ Start computing!
 - ▶ Hint: you can import and run multiple layers at a time!

Lab today -

- ▶ Landscape metrics
 - ▶ Shannon's Diversity Index
 - ▶ Shannon's Evenness Index
 - ▶ Mean Shape Index
- ▶ Class metrics
 - ▶ Percentage of the landscape by patch type
 - ▶ Number of patches by patch type
 - ▶ Mean patch area by patch type
- ▶ Your choice
 - ▶ Choose two additional metrics to compliment those already calculated
